

ENGINEERING

Assisting you in the initial phase of your project

Passenger flows are increasing, regulations are tightening, requirements on baggage and PIF systems are intensifying, IT systems are developing and interconnecting... All these constraints are difficult to manage and handle simultaneously for airports.

TG concept controls your problems and helps you in these steps.

Recommendations

Whatever your problematic, we are attentive to assess your system and propose solutions adapted to your needs. You can expect our experience with various systems.

Our diagnostics provide objective elements and concrete measures to facilitate decision-making.

- Analysis and diagnosis
- Improvement of flows
- Safety analysis

Project Owner

- Feasibility studies
- Study Development
- Preparation of the final project
- Preparation of tender documents (specifications, planning, budget breakdown)
- Monitoring of calls for tenders
