

HAND BAGGAGE SCREENING

Assisting you to fix hand baggage screening systems

Passenger and carry-on baggage screening is a significantly important element of airport security. In order to prevent any introduction of illegal objects, **Hand baggage screening (HBS)** are used to check the contents of hand luggage.

TG concept designs, supplies and installs Hand baggage screening systems in compliance with the standards in force and offers you the following:

- Integration of passenger security check
- Hand baggage screening security machines
- Tables and accessories
- Bins and trolleys
- Baggage search
- Partitions and closures
- Etc

HBS not only for airports

With the increase in risks and reinforced security measures, **Hand baggage screening** are also installed at the entrances of public establishments deemed sensitive. These stations are most often composed of a security check for the control of persons, and potentially an X-ray control machine.

TG concept

TG concept accompagne les aéroports dans l'élaboration, la conception et l'installation de systèmes de tri bagages.

NOS EXPERTISES

- Étude
